EPCC

- Edinburgh Parallel Computing Centre
 - founded in 1990 at the University of Edinburgh
- Originated from Physics HPC machines and *Edinburgh Concurrent Supercomputer Project*
- Institute within the School of Physics and Astronomy

James Clerk Maxwell Building, The King's Buildings
© Visual Resources, The University of Edinburgh

EPCC

- 24 years old – 80 staff
- Fully self-sustaining
- Turn over ~£5million
- Main UK National HPC Service provider
 - ARCHER – Cray XC30 ~70,000 cores (soon to be 120,000 cores)
 - DiRAC – 6 frame BG/Q
- Wide range of work from HPC to Data Analytics and Cloud
- Work with academia and industry

- Project highlights:
 - IPCC – EPCC is funded by Intel to optimise codes for Xeon Phi
 - CRESTA – we lead only Exascale software co-design project
 - PRACE – we lead the UK's involvement in Europe's HPC research infrastructure
 - FORTISSIMO – lead this flagship project bringing HPC to SMEs across Europe
 - EPiGRAM – combining and improving MPI and PGAS for Exascale
 - SSI – Software Sustainability Institute

EPCC Activities

Software, services and research

- EPCC – what we do
 - Facilities access – for academia and industry
 - Performance optimisation
 - Accelerator computing
 - Software engineering
 - Project management
 - Visitor programmes and training
 - Data integration and data mining
 - Numerical modelling and simulation
 - Future Internet
 - Cloud and distributed computing
 - Parallel application consultancy and design services
 - Broad HPC research programme
 - Standards and Committees (OpenMP, OpenACC, MPI, etc...)

Training

- PRACE Advanced Training Centre
- ARCHER Training co-ordinator
- MSc in HPC
 - ~30 students annually
- Around 600 people trained in past 12 months
 - ~10% from industry
- Develop and teach bespoke courses for industry, e.g.
 - Aerospace
 - Games industry

Industry projects

- Worked with over 750 companies in past 15 years
- Around 50% SMEs
- SME projects tend to be small – 3 to 6 months duration
- Predominately software development and consultancy
- Two current key projects:

Advanced Computing Facility

- The 'ACF'
- Opened 2005
- Purpose built, secure, world-class facility
- Houses wide variety of leading-edge systems and infrastructures
 - National services
 - DiRAC (IBM BlueGene/Q)
 - ARCHER
 - Local services
 - ECDF (provide hosting)
 - INDY – industry machine
 - EDIM1 – DIR machine
- Major expansion built: 6MW, 850m² plant room, 550m² machine
- ARCHER PUE < 1.1

UK Academic Funding Landscape

- Funding councils for particular subject areas - £3bn
 - RCUK – Represents funding councils
 - EPSRC – Engineering and Physics Sciences
 - NERC – Natural Environment
 - BBSRC – Biotechnology and Biological Sciences
 - MRC - Medical
 - AHRC – Arts and Humanities
 - ESRC – Economic and Social
 - STFC – Science and Technologies Facilities (national labs)
 - Lasers
 - Accelerators
 - Neutron and Muon Sources
 - Synchrotron light sources & Free Electron Lasers (Diamond Light)
 - Atmospheric and Space Science
 - Scientific Computing (Hartree Centre)
- No other national laboratories
 - National organisations (CCFE, UKAEA, AWE, Met Office, etc...)

Large HPC contributors

- EPSRC
 - Fund national service
 - ARCHER
 - Fund some regional services
 - Money was available for regional consortium
 - Fund code development and software research
 - Software fellowships
- NERC
 - Fund national service
 - ARCHER
 - Fund code development
- STFC
 - Fund some national resources
 - DiRAC
 - Fund national lab
 - Hartree

UK HPC Ecosystem – Local services

- Many Universities have their own clusters
 - i.e. University of Edinburgh
 - Edinburgh Compute and Data Facility
 - 2912 cores available for Edinburgh staff and students
 - Charged to departments on a fixed amount, can by extra priority
 - Biggest job 128 cores, lots of 1 core jobs run on them

UK HPC Ecosystem – National Services

- National service
 - ARCHER
 - Funded by EPSRC and NERC
 - Time awarded through grant application
 - Also funds software development
 - eCSE (embedded computational science and engineering projects)
- Science based services
 - DiRAC
 - Funded by STFC
 - Collection of machines around the country for particle physics simulations
 - Looking likely to have large KNL upgrade in 2015/2016
 - Met Office
 - Dedicate HPC system for weather simulation
 - Hartree BG/Q
 - Funded by STFC for industry and other collaborations
 - Closed/secret services
 - AWE, GCHQ, etc...

UK HPC Ecosystem – Regional Services

- Five regional consortiums, Six machines
 - Funded by EPSRC with spare money from government
 - Only funded hardware
 - No common model for access or usage
 - Science and Engineering South
 - Emerald: 372 NVIDIA Tesla GPUs: 119 TFlop/s
 - Idris: 12,000 core Intel Westmere CPU system: 108 TFlop/s
 - ARCHIE-WeSt
 - 3,500 core Intel Westmere CPU system: 38 TFlop/s
 - HPC Midlands
 - 3,000 core Intel Sandy Bridge system: 48 TFlop/s
 - N8 HPC
 - Polaris: 5,000 core Intel Sandy Bridge System: 110 TFlop/s
 - MidPlus
 - Minerva: 6,000 core Intel

UK HPC Funding Opportunities

- Full research projects
 - Apply direct to council as any other project does
 - Software development very hard to fund this way
- Small part of someone's research project
 - Addition to grant to do some software optimisation or development
- Tailored funding calls
 - i.e. Software for the future
- ARCHER eCSE funding
- Commercial funding

Surviving in this funding environment

- 80 staff – fully self sufficient
 - Continual process of bringing in new project to sustain staff levels
 - Staff generally work across projects
 - Not academic approach, more like industry project management
 - International collaborations
 - Nu-FuSE, eXtasy, etc...
 - Large European projects
 - Co-ordinate and research partners
 - Large UK research project
 - Hosting UK national facility
 - Software Sustainability Institute
 - Small UK projects
 - Collaborate with academics on proposals
 - Work with industry on their codes
 - Small University projects
 - Collaborate within the University on HPC research
 - Training and teaching
 - MSc, PhD students, national and international training (i.e. ARCHER and PRACE training)

Surviving in this funding environment

- Selling HPC resource to industry
 - New machine recently purchased
 - Indy: 1536 cores, infiniband machine
 - Ultra: UV2000, 512 cores, 8 TB shared memory
 - Provide bespoke access and setup
 - Windows dual-boot possible

Summary

- EPCC is an institute in the University of Edinburgh
- We are funded through project work
- UK has a number of large HPC funders
 - No joined up funding of HPC resources or joined up HPC services
 - Two major services: ARCHER and DiRAC, no transfer between them
 - No way to transfer between these and the regional consortium
- PRACE also an important resource for UK researchers

HPC Usage
